High-Performing Network

High-Performing People

The Network

Great Plains Communications (GPC) is highly committed to providing the quality equipment, superior customer service and strict attention to detail that culminate in a high-performing network. Our forward-thinking approach to engineering the network for scalability ensures clients will have the speed and reliability for both present and future needs as technology and bandwidth demands continue to increase.

Network Highlights

- 99% buried fiber
- Unique routes
- MEF Certification
- 99.999% reliability on our core network
- 20,000+ mile fiber network with over 800 miles in the Omaha Metro
- Fully meshed transport core network
- 24x7x365 Network Operations Center located in Blair, Nebraska
- Secure fiber network designed with ringed redundancy, scalability and flexibility
- Local presence with technicians strategically located across our regional fiber footprint

Commitment to Quality and Service

High-Quality Standards

The highest construction and maintenance standards and continuous upgrades performed by experienced, certified technicians and engineers is an integral part of the GPC commitment to network quality.

Construction Standards to Promote Network Reliability

- Buried fiber, minimizing exposure to elements and fiber cuts
- Strand performance testing prior to installation
- Installation and splicing completed by GPC employees
- Installed fiber splice vaults positioned over gravel and mesh screen
- 20,000 lb. fiber splice vault lid load rating

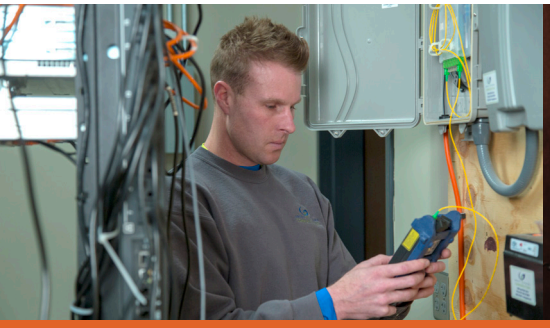
Certifications

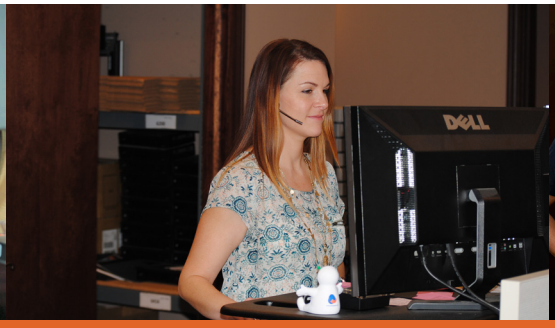
- MEF network certification
- CISCO Engineering certifications
- SIP SSCA certifications

24x7x365 – Network Operations Center

GPC monitors the network around the clock at our Network Operations Center (NOC) located in the corporate headquarters building in Blair, Nebraska. Constant monitoring ensures reliability and rapid response to the needs of all network customers. Benefits of our Network Operations Center include:

- 24x7x365 network monitoring to ensure superior reliability and connectivity
- Proactive communication and monitoring to customer network
- Central point of contact for all network maintenance
- Rapid response to network outages and alarms

The Team




One local team of experts will be assigned to your project and will communicate with you often throughout the implementation, turn-up, testing and maintenance process. Communication begins with a project kick-off meeting to introduce all team members and answer questions prior to construction. We pride ourselves on treating customers like partners. As such, we take your project very seriously and believe in keeping you informed as we bring your concept to fruition and deliver services that are reliable, fast and effective to accelerate the success of your business. Once your project is complete, we touch base often and respond to any needs, questions or service issues by dispatching local, certified technicians to troubleshoot and keep your system running at maximum performance levels.
